Three-core power cables with aluminium conductors, with XLPE, steel-wire armoured, with strengthened polyethylene outer sheath

Technical cable requirements correspond to IEC 60502-2

Cables are used for laying:
- *in places, where mechanical impacts on cable are possible, including tensile forces*
- *in soil (trenches)*
- *on difficult route sections, according to the unique specification*
- *in the air, including cable structures, if provided the additional fire protection*

It is possible to manufacture cables with extruded semiconductor layer along outer sheath.
Order entry example:
АПвЭКПу-П–20 3х300/25 ТУ У 31.3-00214534-017-2003
An extruded semiconductor layer along outer sheath ensures the correct testing of cable line with sections of underground laying in polymer pipes.

It is possible to manufacture cables with an integrated fiber-optic module.
Order entry example:
АПвЭКПу-20 3х300/25 (ОМ) ТУ У 31.3-00214534-017-2003
In conjunction with the DTS system, the integrated fiber-optic module can act as a distributed cable line temperature sensor.

It is possible to manufacture cable with sealed conductors.
