ПвЭСПу-15 1х800 ТУ У 27.3-00214534-092:2016

Single-core power cables with copper conductors, XLPE-insulated, with copper screen, lead-sheathed, with reinforced outer sheath of polyethylene

Technical cable requirements correspond to IEC 60502-2

Cables are used for laying:

- in places, where small mechanical impacts on cable are possible, including tensile forces
- in soil (trenches) with high corrosiveness
- in damp, partially flooded premises
- in wetlands
- in non-navigable waters
- on difficult route sections, according to the unique specification
- in the air, including cable structures, if provided the additional fire protection

It is possible to manufacture cables with extruded semiconductor layer along outer sheath. Order entry example:

ПвЭСПу-П-15 1х800/35 ТУ У 27.3-00214534-092:2016

An extruded semiconductor layer along outer sheath ensures the correct testing of cable line with sections of underground laying in polymer pipes.

It is possible to manufacture cables with an integrated fiber-optic module.

Order entry example:

ПвЭСПу-15 1х800/35 (ОМ) ТУ У 27.3-00214534-092:2016

In conjunction with the DTS system, the integrated fiber-optic module can act as a distributed cable line temperature sensor.

Cables without copper screen can also be manufactured

It is possible to manufacture cable with sealed conductor. Order entry example: $\Pi_B \Im C\Pi_Y$ -15 1x800/35 (r) TY Y 27.3-00214534-092:2016
