Signal blocking cables with copper conductors, with polyethylene insulation, with water-blocking core filling, in aluminium sheath, with double-steel-tape armouring, in polyethylene hose

Designed for electrical installations of railway signaling, centralization, blocking and automation at a rated voltage of 380 V AC at frequency 50 Hz or 700 V DC

Cables are used for laying:

- *in soil*
- *in conditions of excessive humidity*
- *at external electrical influences*
- *in places, where small mechanical impacts on cable are possible, including tensile forces*
